👤 PROFILE

Accomplished **Backend Software Engineer** with 4+ years of experience designing and delivering **scalable, cloud-native microservices** using Java and Spring Boot in FinTech and banking environments. Expert in **workflow-driven platforms and rule-based engines**, enabling real-time decisioning, automated policy enforcement, and configurable business logic. Proven ability in **designing and integrating secure, high-performance REST APIs** and orchestrating **complex multi-system integrations** with internal and external services. Skilled in **event-driven architectures** using Kafka, supporting high-volume, low-latency transaction processing and real-time analytics. Strong expertise in **database architecture and optimization** (MariaDB, PostgreSQL, Oracle) for workflow-based and transactional systems. Experienced in **cloud-native deployments and DevOps practices**, including Kubernetes, Helm, CI/CD pipelines, and observability for scalable and resilient platforms. Adept at **building configurable lending platforms** with eligibility scoring, AI-assisted credit document generation, and role-based dashboards for enhanced decision transparency. Committed to **system security, auditability, and compliance**, implementing role-based access control, logging, and traceable workflow execution across enterprise platforms.

🧠 SKILLS

Programming Languages: Java (8–21), SQL | **Web Technologies:** HTML, CSS | **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, RESTful APIs | **Build and Automation Tools:** Gradle, Maven, Jenkins, JFrog | **Application Servers and Platforms:** Tomcat, Kafka, Kubernetes | **Databases:** PostgreSQL, Oracle. | **Messaging & Streaming:** Apache Kafka | **Documentation:** Developer Documentation, Unit Test Cases Document. | **Designing Tools:** Figma

👛 PROFESSIONAL EXPERIENCE

System Engineer

May 2026 – Present | Mumbai, India

Tata Consultancy Services (TCS)

- Contributed to enterprise **data management and processing applications** for Bank of America, developing and enhancing backend functionality using **Java, Spring Boot, REST APIs, and Oracle SQL**.
- Designed and implemented a **REST API for Excel file ingestion and transformation**, dynamically processing spreadsheet data into structured .prep flat files while preserving source formatting, column order, blank values, and data integrity.
- Enhanced **data validation and reporting modules**, implementing configurable validation rules, report layouts, field mappings, expressions, and database-driven configurations for financial data processing.
- Developed and optimized **Oracle SQL scripts and database configurations** supporting report generation, validation rules, field mappings, and enterprise data-processing workflows.
- Worked on **FOSS/security remediation and dependency upgrades** across Java/Spring applications, analyzing dependency conflicts, application compatibility, and Java runtime requirements.
- Supported application **build, deployment, and troubleshooting** across JBoss and Linux environments using Maven, Jenkins, PuTTY, WinSCP, and application logs.
- Investigated and resolved integration and environment issues across **application, database, SFTP, and downstream processing components**, performing root-cause analysis through logs and code-level debugging.

- Collaborated with cross-functional teams in an **Agile/Scrum environment**, managing source code through Git, feature branches and pull requests while coordinating development, testing, and release activities.

Software Engineer

May 2025 – Feb 2026 | Mumbai, India

Digital Deer Solutions

- Implemented a scalable, cloud-native backend platform using Java 21 and Spring Boot, supporting configurable workflows, high-volume transactions, and real-time processing.
- Designed a workflow-driven engine powered by dynamic JSON configurations, enabling reusable business flows, logic execution & policy-driven decisioning without code changes.
- Developed a real-time rules and decision-processing framework for eligibility evaluation, scoring, and policy enforcement with structured, auditable, and explainable outcomes.
- Built backend services for automated document generation and structured data transformations, reducing manual effort and accelerating business processes.
- Designed and deployed microservices architecture for workflow orchestration, decision processing, authentication & document services, ensuring modularity and maintainability.
- Created relational database models in MariaDB to manage workflow states, scoring configurations, hierarchies, and audit trails, enhancing system performance and reliability.
- Integrated multiple internal and external APIs with robust error handling, retries, and fallback mechanisms to ensure uninterrupted platform operations.
- Deployed and managed services on Kubernetes using Helm, handling environment configurations, ingress routing, secrets management, and system observability.
- Implemented secure, role-based RESTful APIs with validation, audit logging, and access control to ensure data integrity and platform compliance.
- Developed role-based dashboards and backend analytics services, supporting real-time tracking, decision transparency, and audit-readiness.
- Enforced clean code principles, maintainability, and traceability, ensuring all system decisions and actions were fully logged and explainable.

Associate Consultant

Jul 2022 – May 2025 | Mumbai, India

Intellect Design Arena, Intellect Global Consumer Banking (IGCB)

- Collaborated within development teams leveraging Spring Boot, Angular, and REST frameworks to design and implement core banking application features.
- Owned and managed a critical microservice, ensuring continuous improvement, stability, and production issue resolution, enhancing user satisfaction and system reliability.
- Developed banking product enhancements, including covenant management, renewals, disbursement, collateral, and legal workflows, increasing product functionality by 25%.
- Created and deployed Liquibase database scripts, optimizing database operations, reducing errors, and improving performance by 40%.
- Developed POCs for global banking demos, highlighting system capabilities and contributing to a 15% increase in business acquisition.
- Managed deployments via Jenkins CI/CD on cloud environments, ensuring smooth production rollouts and minimal downtime.
- Designed and implemented user-friendly Angular interfaces, enhancing user experience and usability by 10%.

PROJECTS

Bank of America

May 2026 – Present

TCS

Worked on an enterprise data management application supporting file processing, data validation, reporting, and transformation workflows. Contributed to backend development using Java and Spring Boot, including Excel-to-PREP file processing, REST API development, configurable validation and reporting enhancements, Oracle database changes, and application deployment/troubleshooting in JBoss and Linux environments.

Digital Deer Solutions

Designed and developed a configurable digital lending platform supporting Retail and MSME loan journeys, powered by workflow-driven architecture and real-time credit decisioning. The platform includes eligibility and scoring rule engines, bureau and KYC integrations, AI-assisted Credit Analysis Memorandum (CAM) generation, and role-based dashboards for Relationship Managers and Underwriters, enabling explainable, policy-driven credit decisions.

One Origination (Commercial Loan and Retail Loan)

Intellect Design Arena

One Origination is a product that streamlines the origination, processing, and monitoring of loans, boosting customer engagement and profitability throughout the loan lifecycle.

HDFC

Intellect Design Arena

Tailored to customer needs, the system allows users to request corporate loans and manage all stages from initiation to approval.

 EDUCATION

Masters of Computer Application, AI and ML

Jul 2023 – Jul 2025 | Mumbai, India

Amity University - CGPA: 8.63/10 (First Division with Distinction)

Bachelor of Science, Information Technology

Jul 2019 – Apr 2022 | Mumbai, India

Ramniranjan Jhunjhunwala College - CGPA: 9.13/10

 AWARDS

SPOTLIGHT - Collaboration & Platforms Award - Intellect Design Arena

- Configured HDFC workflow and rules using iTurmeric, optimizing processes for efficiency.
- Mastered UI design and server-side development functionalities, ensuring high performance.
- Worked independently to deliver innovative, high-quality solutions, setting new team standards.
- Recognized for collaboration, dedication, and forward-thinking approach in project execution.

Spot Award - Intellect Design Arena

Honored with a Spot Award in recognition of contributing to the Credit One USA Bank Demo Project.
